

React Setup using Vite & PowerShell Error Handling

PowerShell (.ps1) Error

Sometimes while running npm commands in PowerShell, you may get errors like:
"running scripts is disabled on this system"
or
"npm.ps1 cannot be loaded"

This happens because PowerShell blocks script execution for security reasons.

Solution 1: Run Command in VS Code Terminal

You can run the command directly in the VS Code terminal.

Run the following command:

```
Set-ExecutionPolicy RemoteSigned -Scope CurrentUser
```

Press Y and restart the VS Code terminal.

If permission is denied, then open VS Code as Administrator once.

Solution 2: Use Command Prompt (CMD)

Instead of PowerShell, you can open Command Prompt (CMD) and run all React + Vite commands there.

CMD does not show .ps1 execution errors.

Create React Project using Vite

- npm create vite@latest
- Select Framework → React
- Select Variant → JavaScript
- cd myapp
- npm install
- npm run dev

Open in browser: <http://localhost:5173/>
